#1 Log onto Opal-Rad/Spectacle (icon on desktop) *double click to launch

**default login**
user: admin
pass: 2020tech

#2 Click the ‘Create New Study’ button near the bottom

#3 Enter patient demographics starting with Client ID\Animal Name, (right column fields optional) then click ‘Acquire’

#4 Prepare/position patient for first view

#5 Select view from option on left (selected view is yellow)
Click the “Acquire” button when you are ready to take the X-Ray

Once you see

<table>
<thead>
<tr>
<th>READY FOR EXPOSURE</th>
<th>28 sec</th>
</tr>
</thead>
</table>

across the screen, you may take an X-Ray exposure

*you have 30 seconds, if the exposure is not taken, it will time out, and you must click the Acquire button again
*if an x-ray exposure is taken BEFORE ‘READY FOR EXPOSURE’ appears, it will NOT see the x-ray resulting in another duplicate x-ray exposure to be taken

*Left & Right markers are located near the top under ‘Annotations’

Note
If the AUTO-SHUTTER/CROP feature fails (image is cut off):
1. Move the outer-most purple lines outward to include the cut-off anatomy
2. Click the “Apply” button

Select the ✔ (near the top right) if the image will be saved
Select the ✗ if the image needs to be discarded for any reason
Repeat from step #4 until you are finished, then go to the next step

Click the Exit button when you are finished with the exam
